PROJECTS

RentEasee - Yukthi Innovation Challenge 2024 (Ongoing) - Team Project

[LinkedIn](#) | [GitHub](#)

- A platform for renting yellow board vehicles and hiring freelance drivers, featuring vehicle listings, driver profiles, real-time search, and membership-based access control.
- Technologies: Node.js, Express.js, MongoDB, RESTful APIs
- Built scalable backend APIs for handling vehicle rentals, driver profiles, and user management.

User Registration with JWT Authentication

[Visit](#) | [GitHub](#)

- Designed a secure JWT-based authentication system featuring strong password validation, email verification, duplicate email detection, and an OTP-based password recovery feature.
- Node.js, Express, and MongoDB: Handle registration, store user data, and manage authentication.
- Implemented secure login using JWT, Bcrypt.js, and OTP recovery via Nodemailer.
