Javascript		NodeJS		Teamwork	

PROJECTS

RentEasee - Yukthi Innovation Challenge 2024 (On going) - Team Project   **LinkedIn | GitHub**
- A platform for renting yellow-board vehicles and hiring freelance drivers, featuring vehicle listings, driver profiles, real-time search, and membership-based access control.
- Technologies: Node.js, Express.js, MongoDB, RESTful APIs
- Built scalable backend APIs for handling vehicle rentals, driver profiles, and user management.
- Ensured smooth integration of APIs with the frontend and database teams for a seamless user experience.

User Registration with JWT Authentication   **Visit | GitHub**
- Developed a secure JWT-based authentication system with strong password validation, email verification, email duplication checks, and an OTP-based Forgot Password feature.
- Node.js, Express, and MongoDB: Handle registration, store user data, and manage authentication.
- Secured login with JWT, Bcrypt.js, and OTP recovery via Nodemailer.

To-Do Application with CRUD operations   **Visit | GitHub**
- Built a To-Do app with CRUD functionality and a user-friendly interface for real-time task management.
